

WILINE CYBERSECURITY

Securing your business from evolving threats

We are operating in an environment where over a million new cyberattack mutations occur every day. Every 11 seconds, there's a new ransomware victim. Every 39 seconds, a hacker breaks through a security check.

The threat of compromised cybersecurity is here to stay; criminals alter and upgrade their strategies every day to evade anti-malware efforts. Toolkit-like programs lower the entry bar for cyber criminals, enabling even novice attackers to be successful against scattered security infrastructures.

CYBER CRIMINALS DON'T DISCRIMINATE BY SIZE OR INDUSTRY

If you're operating a business, you're a target. Without proper cybersecurity measures in place, the question of whether your business might be vulnerable to hacks goes from 'if' to 'when'.

With WiLine Cybersecurity Solutions, you can deploy the protection you need without establishing a sophisticated security operations center (SOC) or hiring costly specialized staff. We simplify and centralize cybersecurity for your team so you can get back to business without having to worry about security vulnerabilities.

Pillars of a Security Posture

Security Driven Networking

Convergence of Networking and Security at New Network Edges

Zero Trust Access

More users of Network and more Devices IP Enabled (IoT/OT)

Adaptive Cloud Security

Applications continue to move across different Clouds

WHAT WORKED IN THE PAST DOESN'T WORK TODAY

When we think about cybersecurity, a few key terms usually spring to mind: firewalls, UTMs. First-generation network security (stateful firewalls) focused on securing the connection, and a second generation of network security (next-generation firewalls and UTMs) expanded inspection to the application and content.

However, modern problems require modern solutions. To secure today's digital operations as the perimeter rapidly expands, we employ a broad, integrated, and nuanced automated security approach with modern features that provide end-to-end protection for your data, users, and infrastructure everywhere.

A LAYERED APPROACH TO CYBERSECURITY

WiLine Cybersecurity offers complete protection across the digital attack surface through a combination of technology from best-in-class security partners including VMware, Fortinet, and Blue Hexagon.

All partners are enterprise-proven, certified, and offer an extensive cybersecurity ecosystem. Businesses of all sizes can now take advantage of the best technology from the industry leaders using WiLine as a one-stop source.

WILINE CYBERSECURITY COMPONENTS

Fortinet: next generation firewalls, leveraging its Cyber Threat Assessment Program (CTAP).

Blue Hexagon: State-of-the art network detection response (NDR).

VMware: Secure SD-WAN solution with end-to-end segmentation and edge security options.

WiLine's Multipronged approach for guaranteed security

- Affordable Managed Solution with Managed Layered Approach
- Automatic Detection, Remediation, and Restoration to a Pre-Infected State
- Simple to Deploy and Manage

Protect your business against cyber threats. Put your guard up with WiLine.
